

## Easton Emergency Management

### Safety Tips During the Storm

The Easton Emergency Management Team would like to provide the following information to residents to better prepare for an approaching storm.

## **Report Power Outages to Nation Grid**

**To report wires down or outages call 1-800-465-1212, the reporting line, so that National Grid can properly input the location into our system for a coordinated response.**

National Grid's Outage Central provides comprehensive and timely information about electric power outages. Anyone with an Internet-ready computer can check the status of a power outage, see how many individuals are affected and obtain the estimated restoration time. Information is updated every 15 minutes and is displayed in both an easy-to-read table and a map-based interface.

The map provides an electronic map of our service territory and uses color-coded icons to represent outage locations and the number of customers affected. You can zoom in to a one-mile radius by region, county, town or village, and easily determine the impact a power outage may be having on your local community.
