Solarize My Bill Community Solar Program

What is Community Solar?
Community solar is an exciting and simple way to save money and support local sources of renewable energy in Massachusetts.

Nexamp community solar projects, located across Massachusetts, generate clean, renewable energy that feeds into our utility grid. The energy generated by the panels is assigned to a number of electricity customers, including homeowners, renters, small businesses and non-profits. The solar energy produced will appear on your utility bill as dollar credits, securing you 15% savings on your electricity costs. It's that easy!

Guaranteed 15% savings on your electricity costs

No installation of any equipment on your property

No up-front costs for enrolling or service fees at any time

A partner you can count on – The Town of Easton will be receiving Net Metering Credits from a Nexamp solar project, providing significant electricity savings every year to the Town. Community Solar offers Easton residents, small businesses and non-profits the ability to do the same!

Frequently Asked Questions

Am I eligible?
Any Massachusetts ratepayer with a National Grid, Unitil or Eversource (previously NStar and WMCo) electricity bill is eligible to participate, including homeowners, renters, condo owners, small businesses, and nonprofits.

Do I have to install solar panels or equipment on my property?
No! You are opting into a solar project, which is located remotely. Our project puts renewable energy onto the existing utility grid, and you continue to receive electricity from your utility as usual. There is no installation of anything on your property.

How much does it cost to participate?
There is no cost to enroll and no additional service fees associated with your participation. Your 15% savings are guaranteed for as long as you are participating in the program. Solarize My Bill is mobile and flexible, too. If you move, it may be possible for your savings to move with you.

What will my utility bill look like?
You will see a line item on your regular utility bill labeled “transferred credits”, which appear as a dollar value applied against your monthly electricity costs. Nexamp will size your allocation to meet your electricity needs over the course of a full year. Unutilized credits roll over month-to-month and never expire.

How do I see my savings?
Nexamp’s community solar projects generate credits throughout the year. For each $1.00 transferred to your bill, Nexamp will charge you only $0.85, or at a guaranteed 15% discount. Just like a rooftop system, and depending on your usage patterns, you might “bank” excess credits during the summer, when your project’s production is at a peak, and draw on them during the winter months.

Does this change my relationship with the utility?
Not at all; the utility delivers electricity to your home as usual, and will continue to service all equipment and resolve all power outages. Nexamp will handle all communication with your utility regarding your enrollment in Solarize My Bill. Even if the utility rates change, or if you sign up for a third-party supplier, you will continue to see your 15% savings.

How do I get started?
Go to www.SolarizeMyBill.com to upload your latest utility bill. Our team will analyze your electricity usage and help decide how much solar is right for you. After you sign and return your secure electronic agreement, you will be able to track project progress on your personalized customer portal. Once the solar project goes live, you’ll start to see credits right on your bill!

Project space is limited - sign up today!

About Nexamp:
Nexamp is the largest solar provider based in Massachusetts, with projects in over 100 communities across the Commonwealth. Nexamp builds, owns and operates our own solar projects, so you will have peace of mind working with the same trusted partner every step of the way.
